

**ENVIRONMENTAL PROTECTION AGENCY
MEETING**

**REGION 2 HEADQUARTERS
NEW YORK, NY**

DECEMBER 19, 2019

AGENDA

- **Greetings & Introductions 10:00-10:05 AM**
- **BMPP Regulatory Update 2015-2019**
EcoElectrica 10:05-10:30
 - Five-year summary
- **BMPP Results 2015-2018**
Reefscaping 10:30-11:00 AM
 - Benthic cover
 - Seagrasses (with UPRM)
 - Fishes

AGENDA (CONT.)

- **BMPP Results 2017-2019**
UPR-M 11:00-11:30 AM
 - Water Quality (Continuous/Monthly)
 - Outfall Plume
 - Currents
 - Impingement
 - Entrainment
 - Conservation Projects (Maria Langa/Biobay/Mangroves)
- **BREAK 11:30-11:40 AM**
- **2015-2019 BMPP Closure/Proposal 2020-2025 BMPP**
EcoEléctrica 11:40 AM-12:00 noon
- **Meeting Closure**
All attendees 12:00 noon

Who are we?

Who are we?

Cogeneration Plant

- 530 MW contracted capacity
- Natural gas/propane/fuel oil #2

Desalinization Plant

- 2 MM gallons processed/day
- Water Franchise

LNG Receiving Terminal

- 42 MM Gallon Storage tank
- Pier 1,800 linear ft
- Regasification 279 MM SCFD

EcoEléctrica produces approximately 17% of PR's electric energy.

Capacity to send out up to 186 MMSCFD natural gas to the neighboring PREPA Costa Sur Power Plant in addition to 93 MMSCFD consumed by the facility.

Environmental Context- Cooling Water Discharge

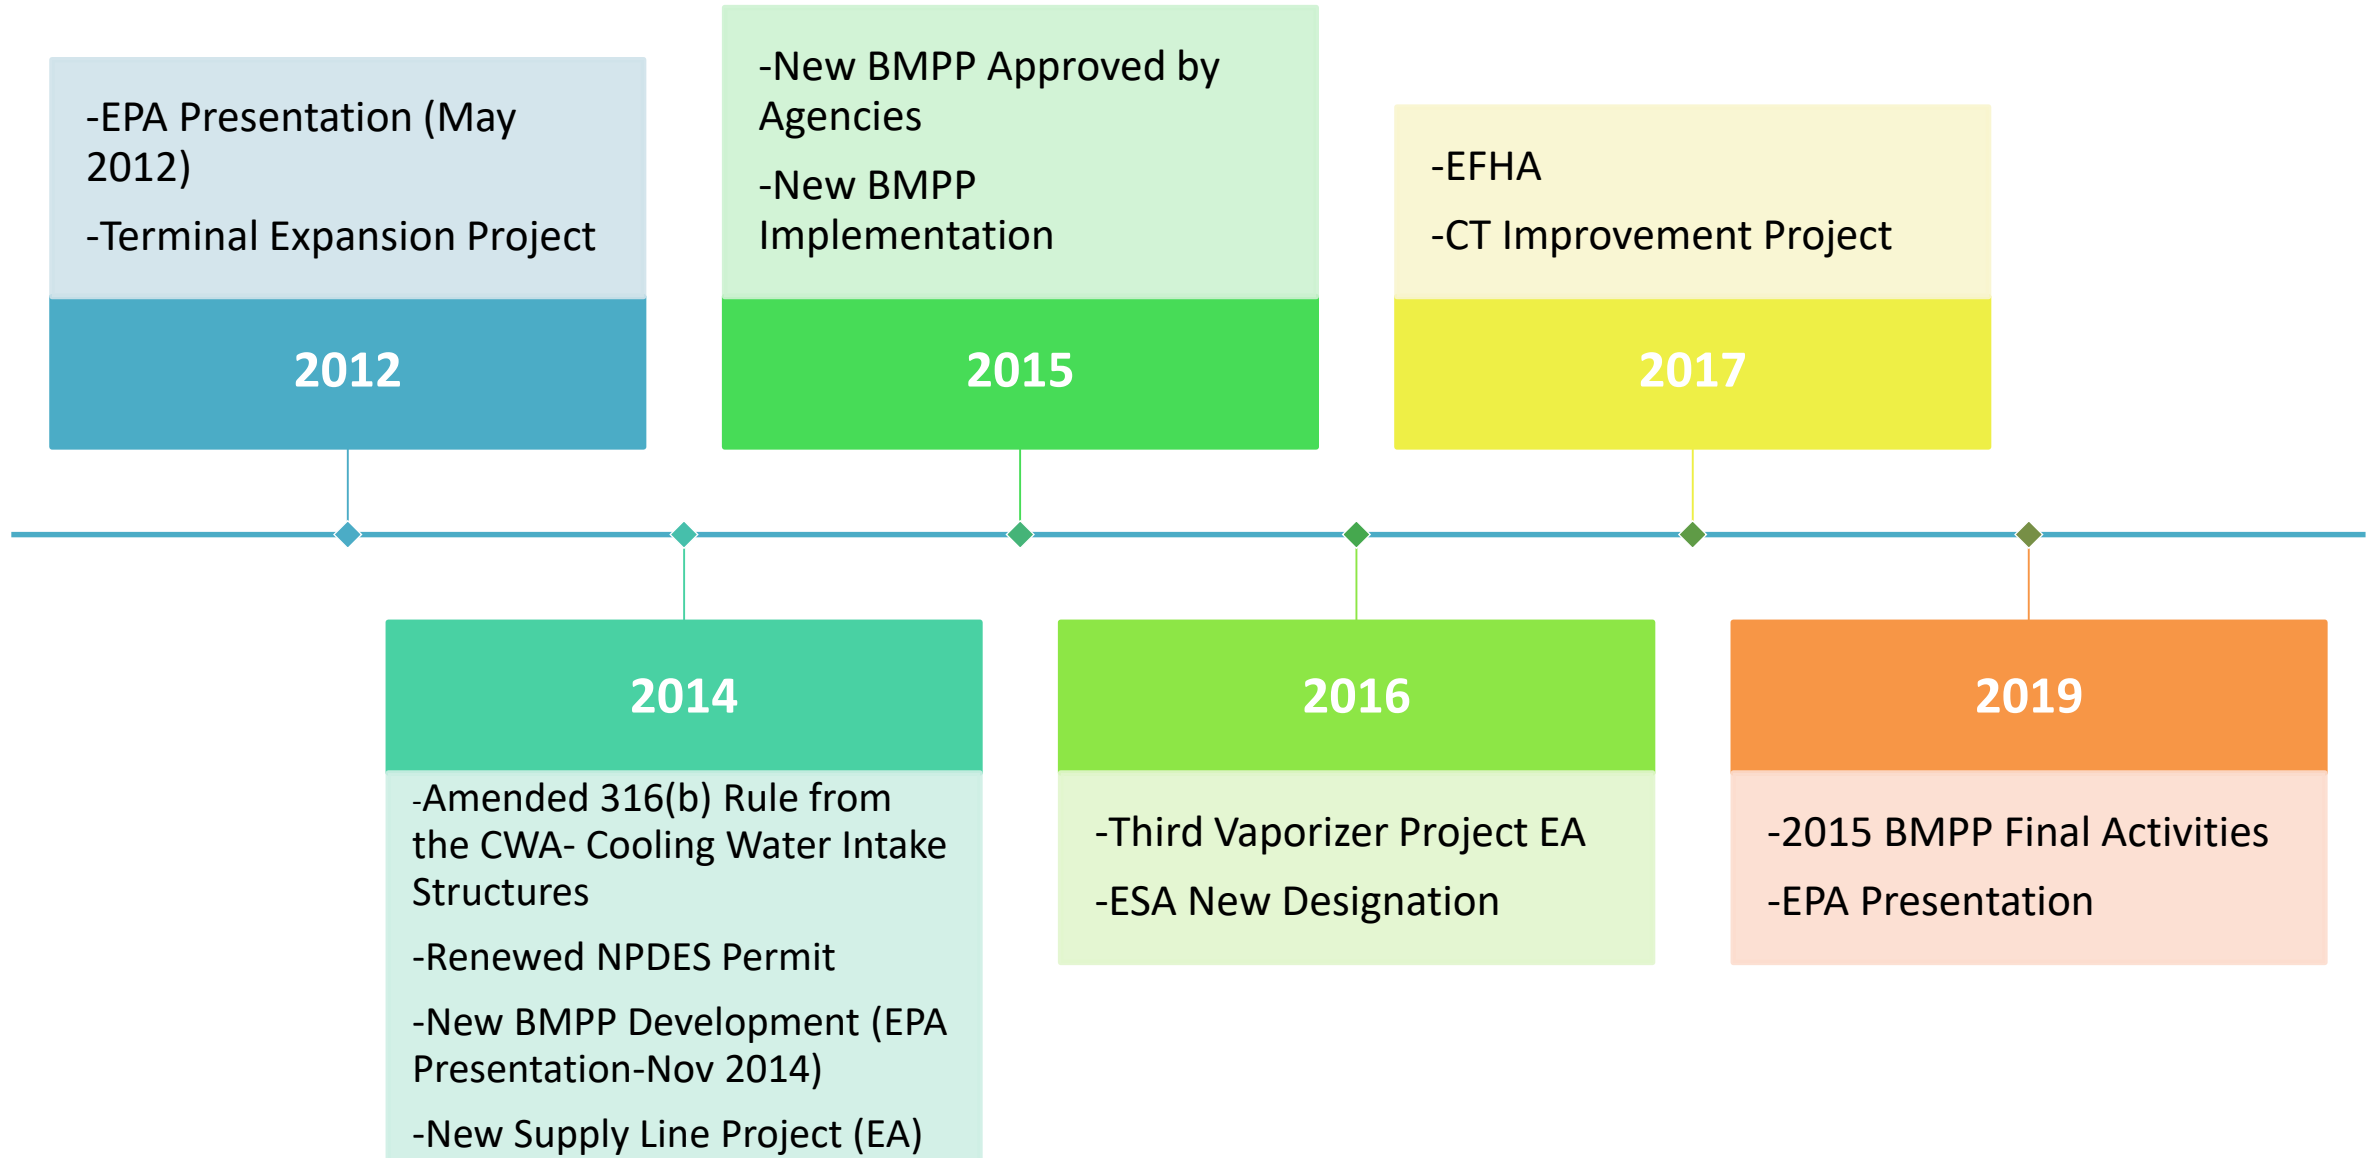

BMPP REGULATORY UPDATE 2015-2019

Background

Background (cont.)

Comments from EPA Meeting November 2014 BMPP 2015-2019

Study	Details
Coral Study	Coral large scale
	Cora small scale
ESA and Action area	Coral ESA
	Coral ESA additional site
Seagrass large scale	Seagrass large scale
	Motile macro invertebrates
	Seagrass Cover Mosaic
Seagrass small scale	Seagrass productivity
	Seagrass epiphytes
Fish Survey	Fish survey
	Passive acoustic
Water Quality Monitoring	Monthly
	Continuous
	Temperature Plume Distribution
Water Currents	One Event
Impingement	One Event
Entrainment	One Event

HJR OVERVIEW

- Benthic Cover
 - Corals
 - ESA
 - Other reefs
- Seagrasses
 - Cover & productivity
- Fishes
 - Surveys
 - Passive acoustic

BENTHIC COVER

EcoEléctrica
"Un mejor ambiente con gas natural"

Monitoring Stations Location

Intake Station

Mean Linear Percent Cover

Discharge Station

Mean Linear Percent Cover

Benthic Cover Summary

- Macroalgae is the dominant benthic organism at both stations
- Coral cover is 13.6% at the Intake Station (NCRMP-PR 9.3%)
- Coral Cover is 8.3% at the Discharge Station (NCRMP-PR-8.0%)
- No Significant differences since 2012

ESA Coral Species

- None of the 7 listed ESA coral colonies on the pilings.
- Pilling are mostly covered by sponges 74% (turf algae 15.2%, hydroids 4.4%, fire coral 4.4% and cyanobacteria 2%).
- One *Acropora palmata* colony lost after hurricane Maria.
- *Orbicella faveolata* colony dislodged from the substrate. This colony was recued and cemented back to the reef.
- Additional surveys identified 5 *Orbicella faveolata* colonies.

***Orbicella faveolata* colony dislodged from the substrate.
Colony was recued and cemented back to the reef.**

Prior to Hurricane Maria
(2017)

Hurricane Maria
Impact

2019 (after restoration)

2019-Bleaching Event and Coral Disease

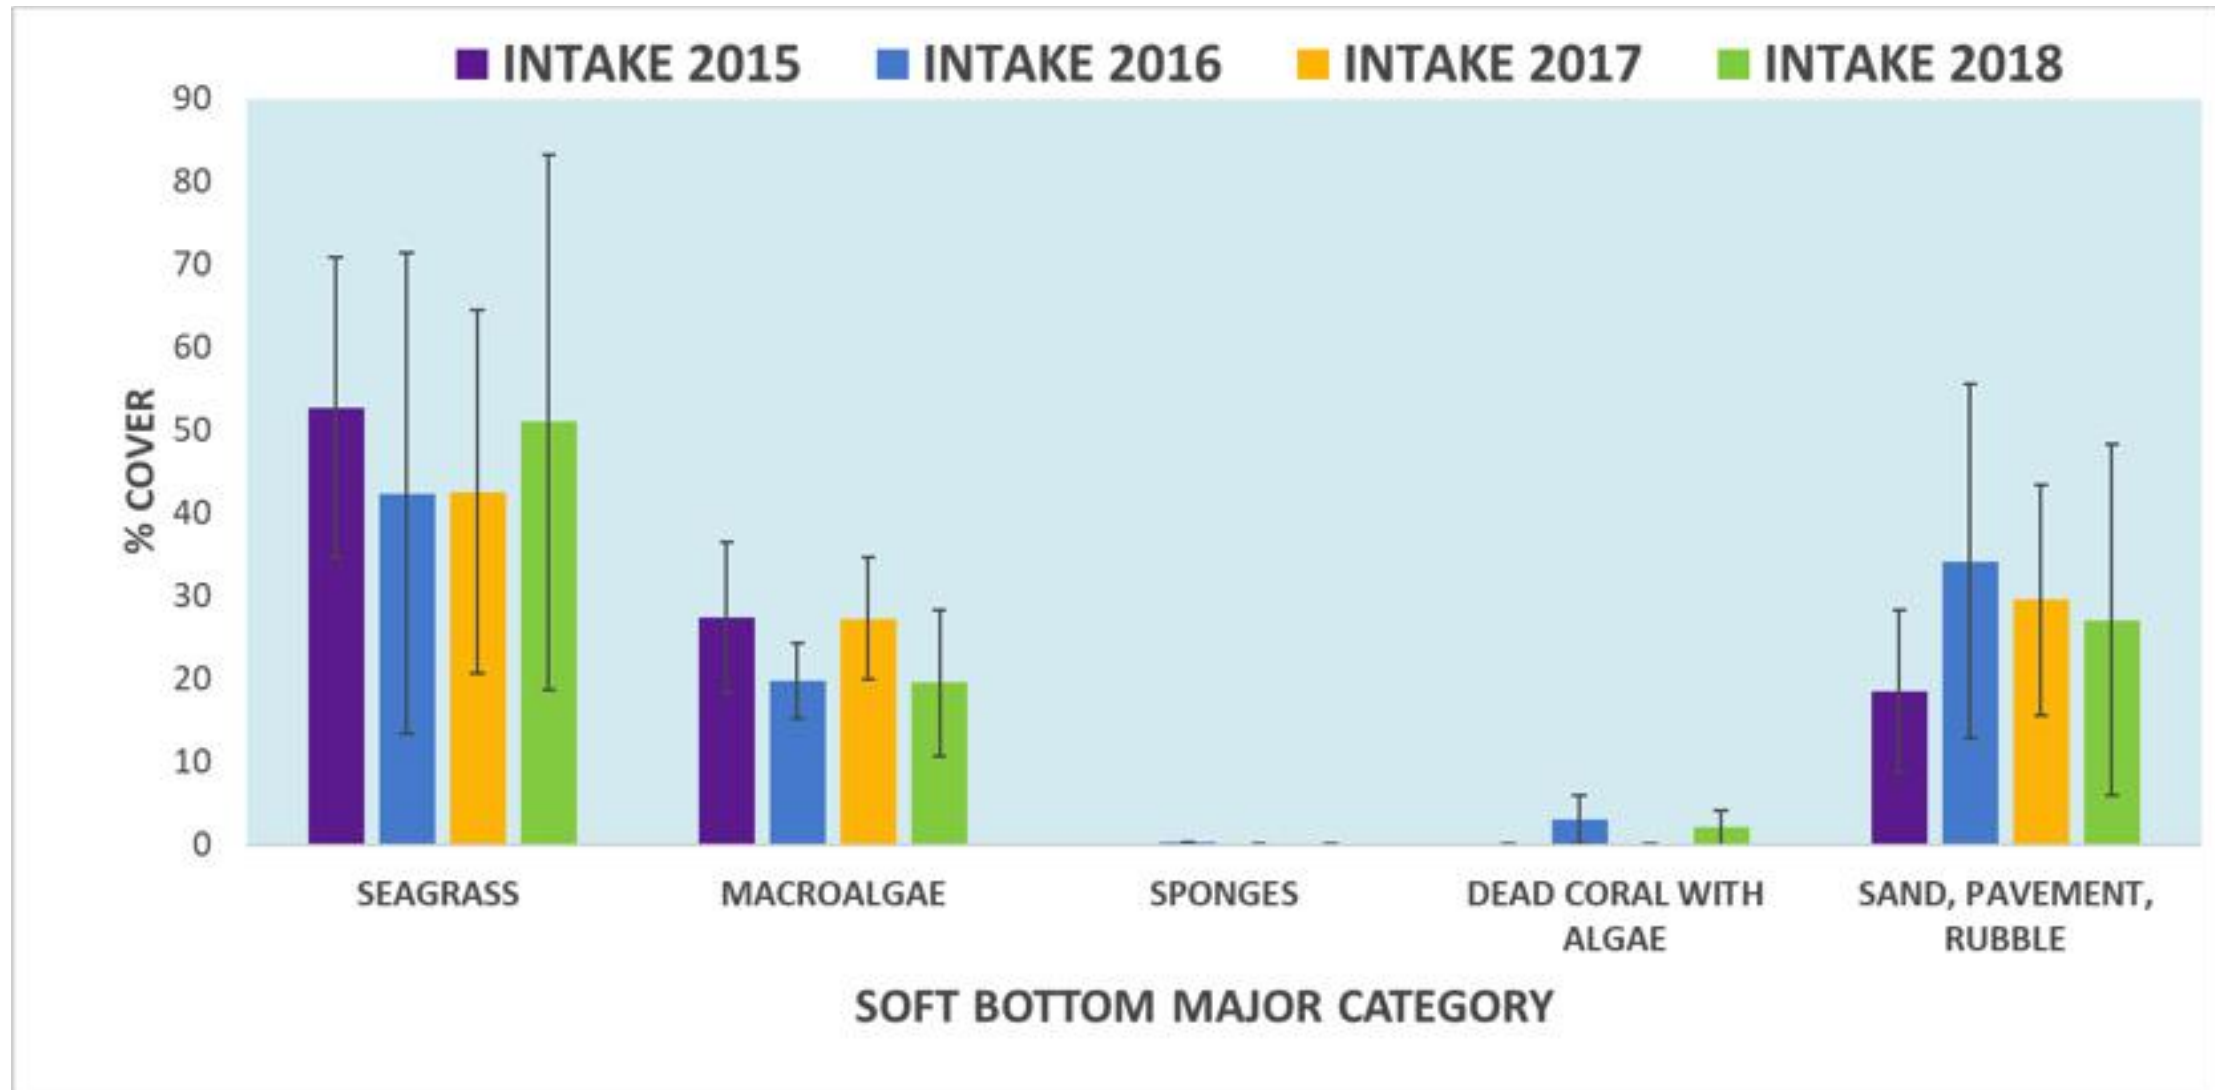

- Regional event including Puerto Rico and U.S. Virgin islands.
- Bleaching in coral colonies, anemones, octocorals and zoantids.
- Coral disease threats expected after bleaching events.
- New fatal coral disease Stony Coral Tissue Loss Disease (SCTLD).

SEAGRASSES

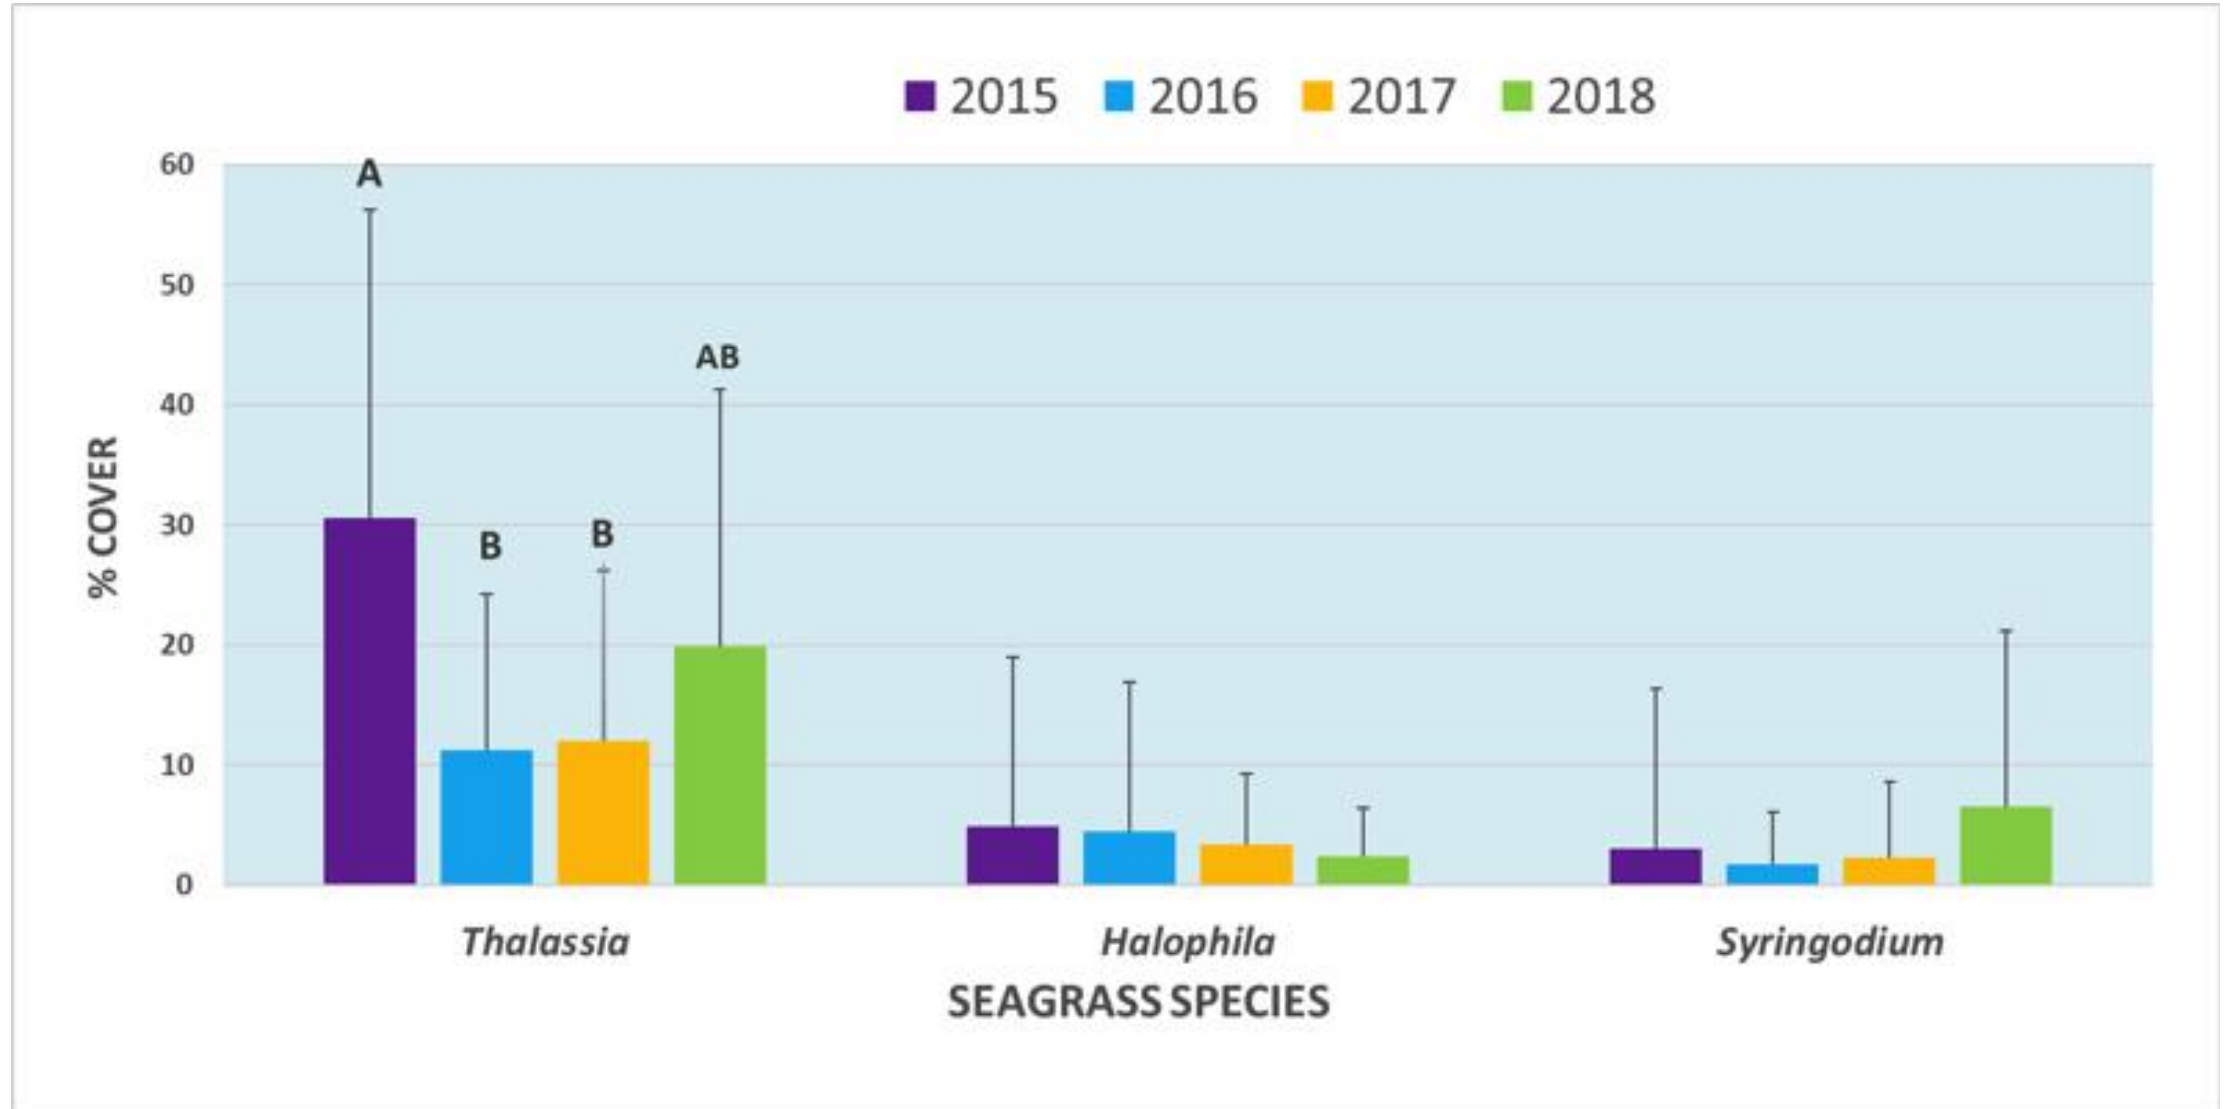

Seagrass Transect Monitoring at the Intake Station

Seagrass Transect Monitoring at the Discharge Station

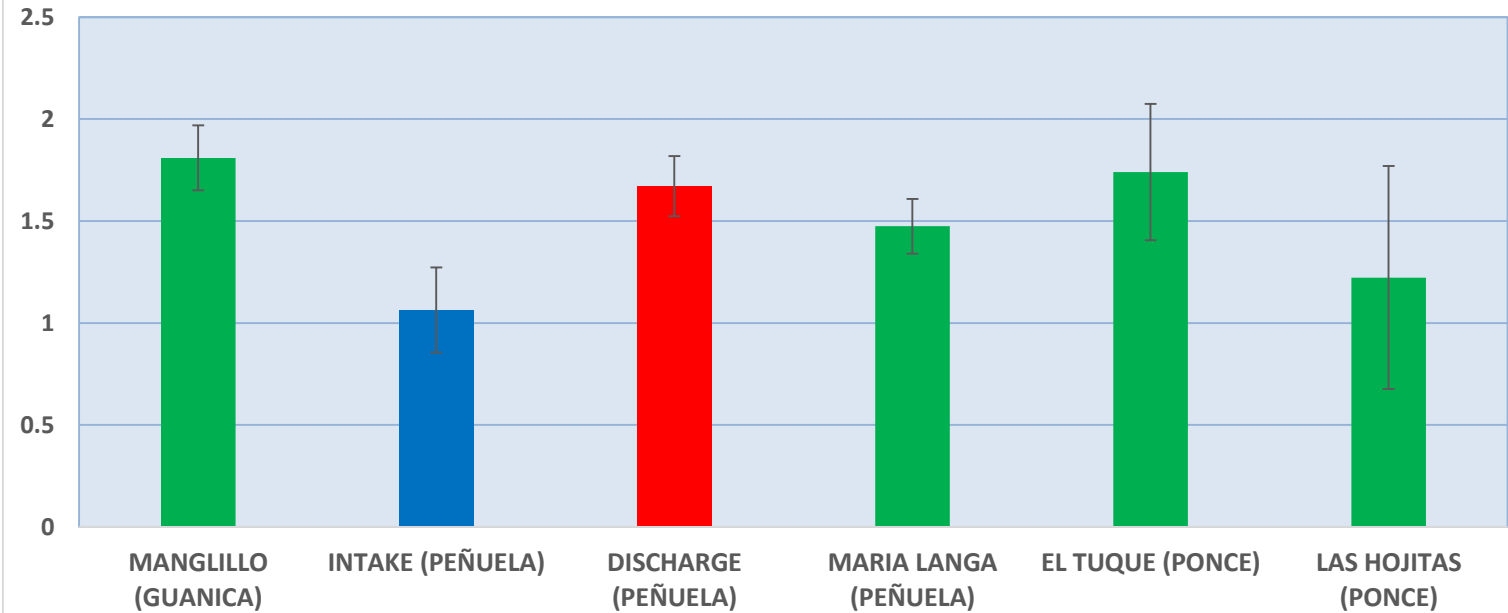

Seagrass Cover by Species at the Discharge Station

ACCUMULATIVE LINEAR BLADE GROWTH (cm/day)

SEAGRASS YEAR PRODUCTION/m²

Seagrasses

DETAILED MAPPING OF SEAGRASS HABITAT

Ernesto Otero and Luis Rodríguez

A

Thalassia testudinum

B

Halodule wrightii

C

Syringodium filiformis

D

Halophila descipiens

Work Flow

Collect hundreds of benthic photos.

Estimate seagrass cover in 0.1m² quadrats (CPCe 4.1*)

GeoRef photos and produce kml files (RoboGeo Ver 6.3.3) for desktop visualization.

Construct % seagrass cover layers using software packages such as Grapher.

*Kohler, K.E. and S.M. Gill, 2006. Coral Point Count with Excel extensions (CPCe): A Visual Basic program for the determination of coral and substrate coverage using random point count methodology. Computers and Geosciences, Vol. 32, No. 9, pp. 1259-1269, DOI:10.1016/j.cageo.2005.11.009.

CAMERA-BUOY-Array (CABUYA)

545m and 14 acres.

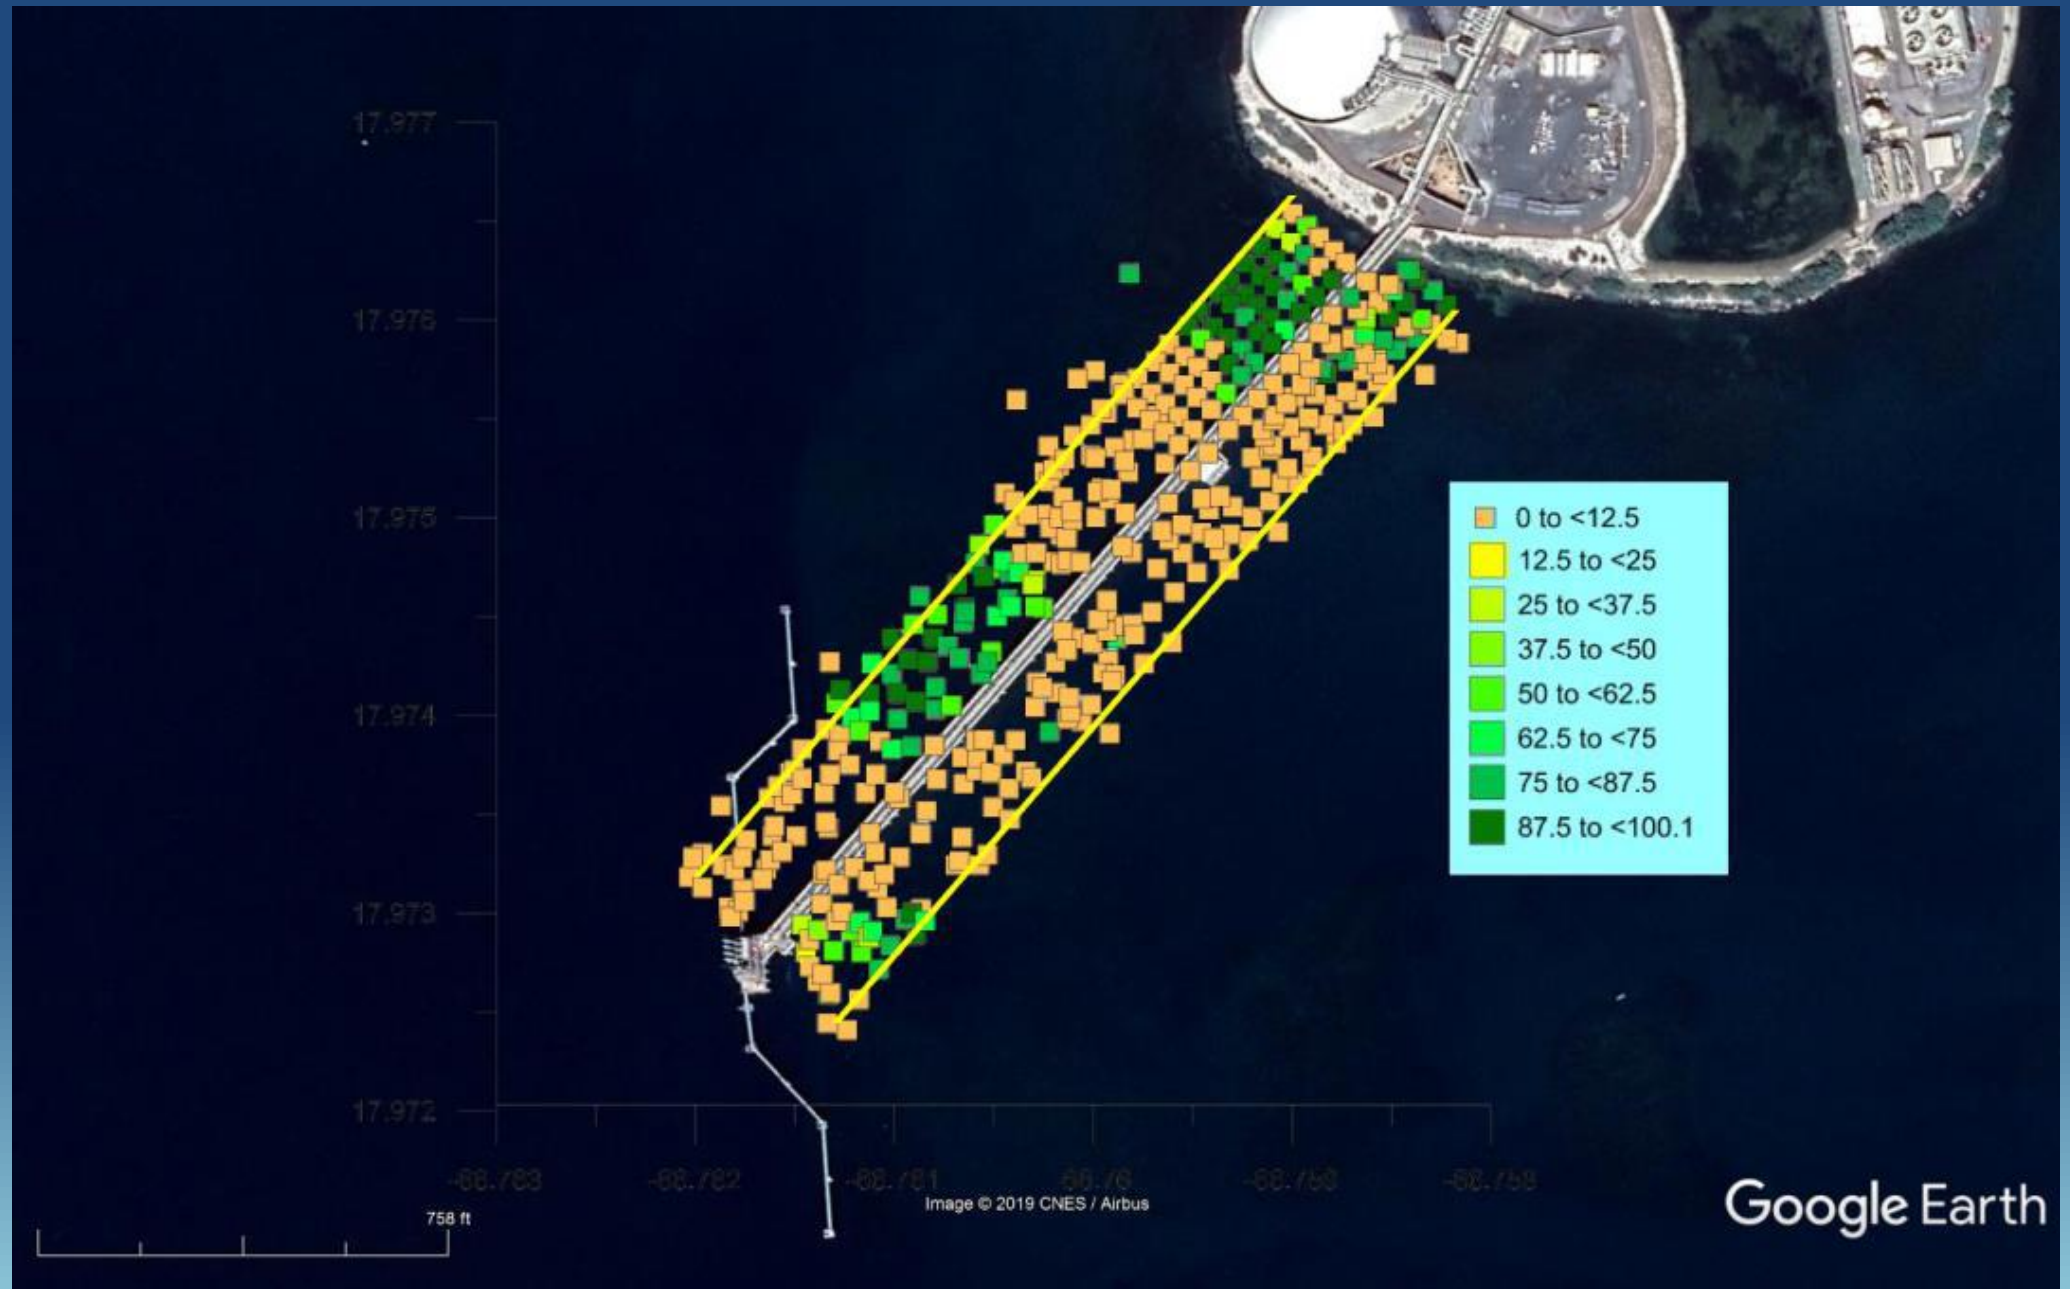

545m and 14 acres.

Results

Percent Seagrass Cover

CONCLUDING REMARKS

- The collection of underwater photographs is available for future reference in Google Earth kml format.
- The map expands knowledge on seagrass habitat distribution near EcoElectrica's pier and provides the opportunity to evaluate other biological components such as algae, and sponges as well as the condition of the bottom (rocky, sandy, muddy).
- However the short term variations (< 1 year) are unknown and have not been assessed.

FISHES

EcoEléctrica
"Un mejor ambiente con gas natural"

FISHES

The most abundant species are small bodied or juveniles.

Nassau grouper

- Nassau grouper designated Endangered Species 2016
- Main threats are fishing and habitat degradation
- Form spawning aggregations in winter (January-April)
- During spawning aggregations they produce sounds
- Passive acoustic methods employed to determine presence
- Recorded from February 1, 2018 to April 2, 2018 (62d)
- **No evidence of Nassau grouper reproduction recorded**

UPR-M OVERVIEW

- Water Quality (Continuous/Monthly)
- Outfall Plume
- Currents
- Impingement
- Entrainment
- Conservation Projects

WATER QUALITY

EcoEléctrica
"Un mejor ambiente con gas natural"

Monthly and Continuous Water Quality Measurements

- Turbidity
- Temperature
- Chlorophyll
- Colored Dissolved Organic Matter
- Phycoerythrin

DISCHARGE PLUME

EcoEléctrica
"Un mejor ambiente con gas natural"

Temperature and Salinity at the Outfall Region

- Vertical measurements from 1-4 meters were collected every 5 meters along transects radiating from the center portion of the outfall.
- Divers used a MiniCTD deployed inversely towards the Surface.

Are there Discernable pattern of temperature within the sampling area?

- Assumption: The effect of the outfall should be stronger towards the center of the diffuser. Data collected closer to the center should be discernable from that towards the outside perimeter. Higher temperatures should be clearly observed closer to the diffuser.
- An analysis to determine the correlation with distance from the center point using the data of the three transects at all depth was conducted.

Results

Temperature with Distance from the Center of Outfall Diffuser

ANOVA					
Source	Sum Sq.	D.F.	Mean Sq.	F	Prob.
Regression	0.009	1	0.009	5.586	0.064
Residual	0.008	5	0.002		
Total	0.018	6			

ANOVA					
Source	Sum Sq.	D.F.	Mean Sq.	F	Prob.
Regression	0.006	1	0.006	6.714	0.049
Residual	0.004	5	0.001		
Total	0.010	6			

EcoEléctrica
"Un mejor ambiente con gas natural"

Observations

Salinity

- Vertical distribution was in general uniform during both sampling years. These can be observed from both minimum and maximum values.
- Salinity for 2017 was approximately 0.9 PSU higher than 2018.

Temperature

- An overall well mixed vertical distribution was observed.
- 0.6°C higher during 2017.

Influence of Outfall

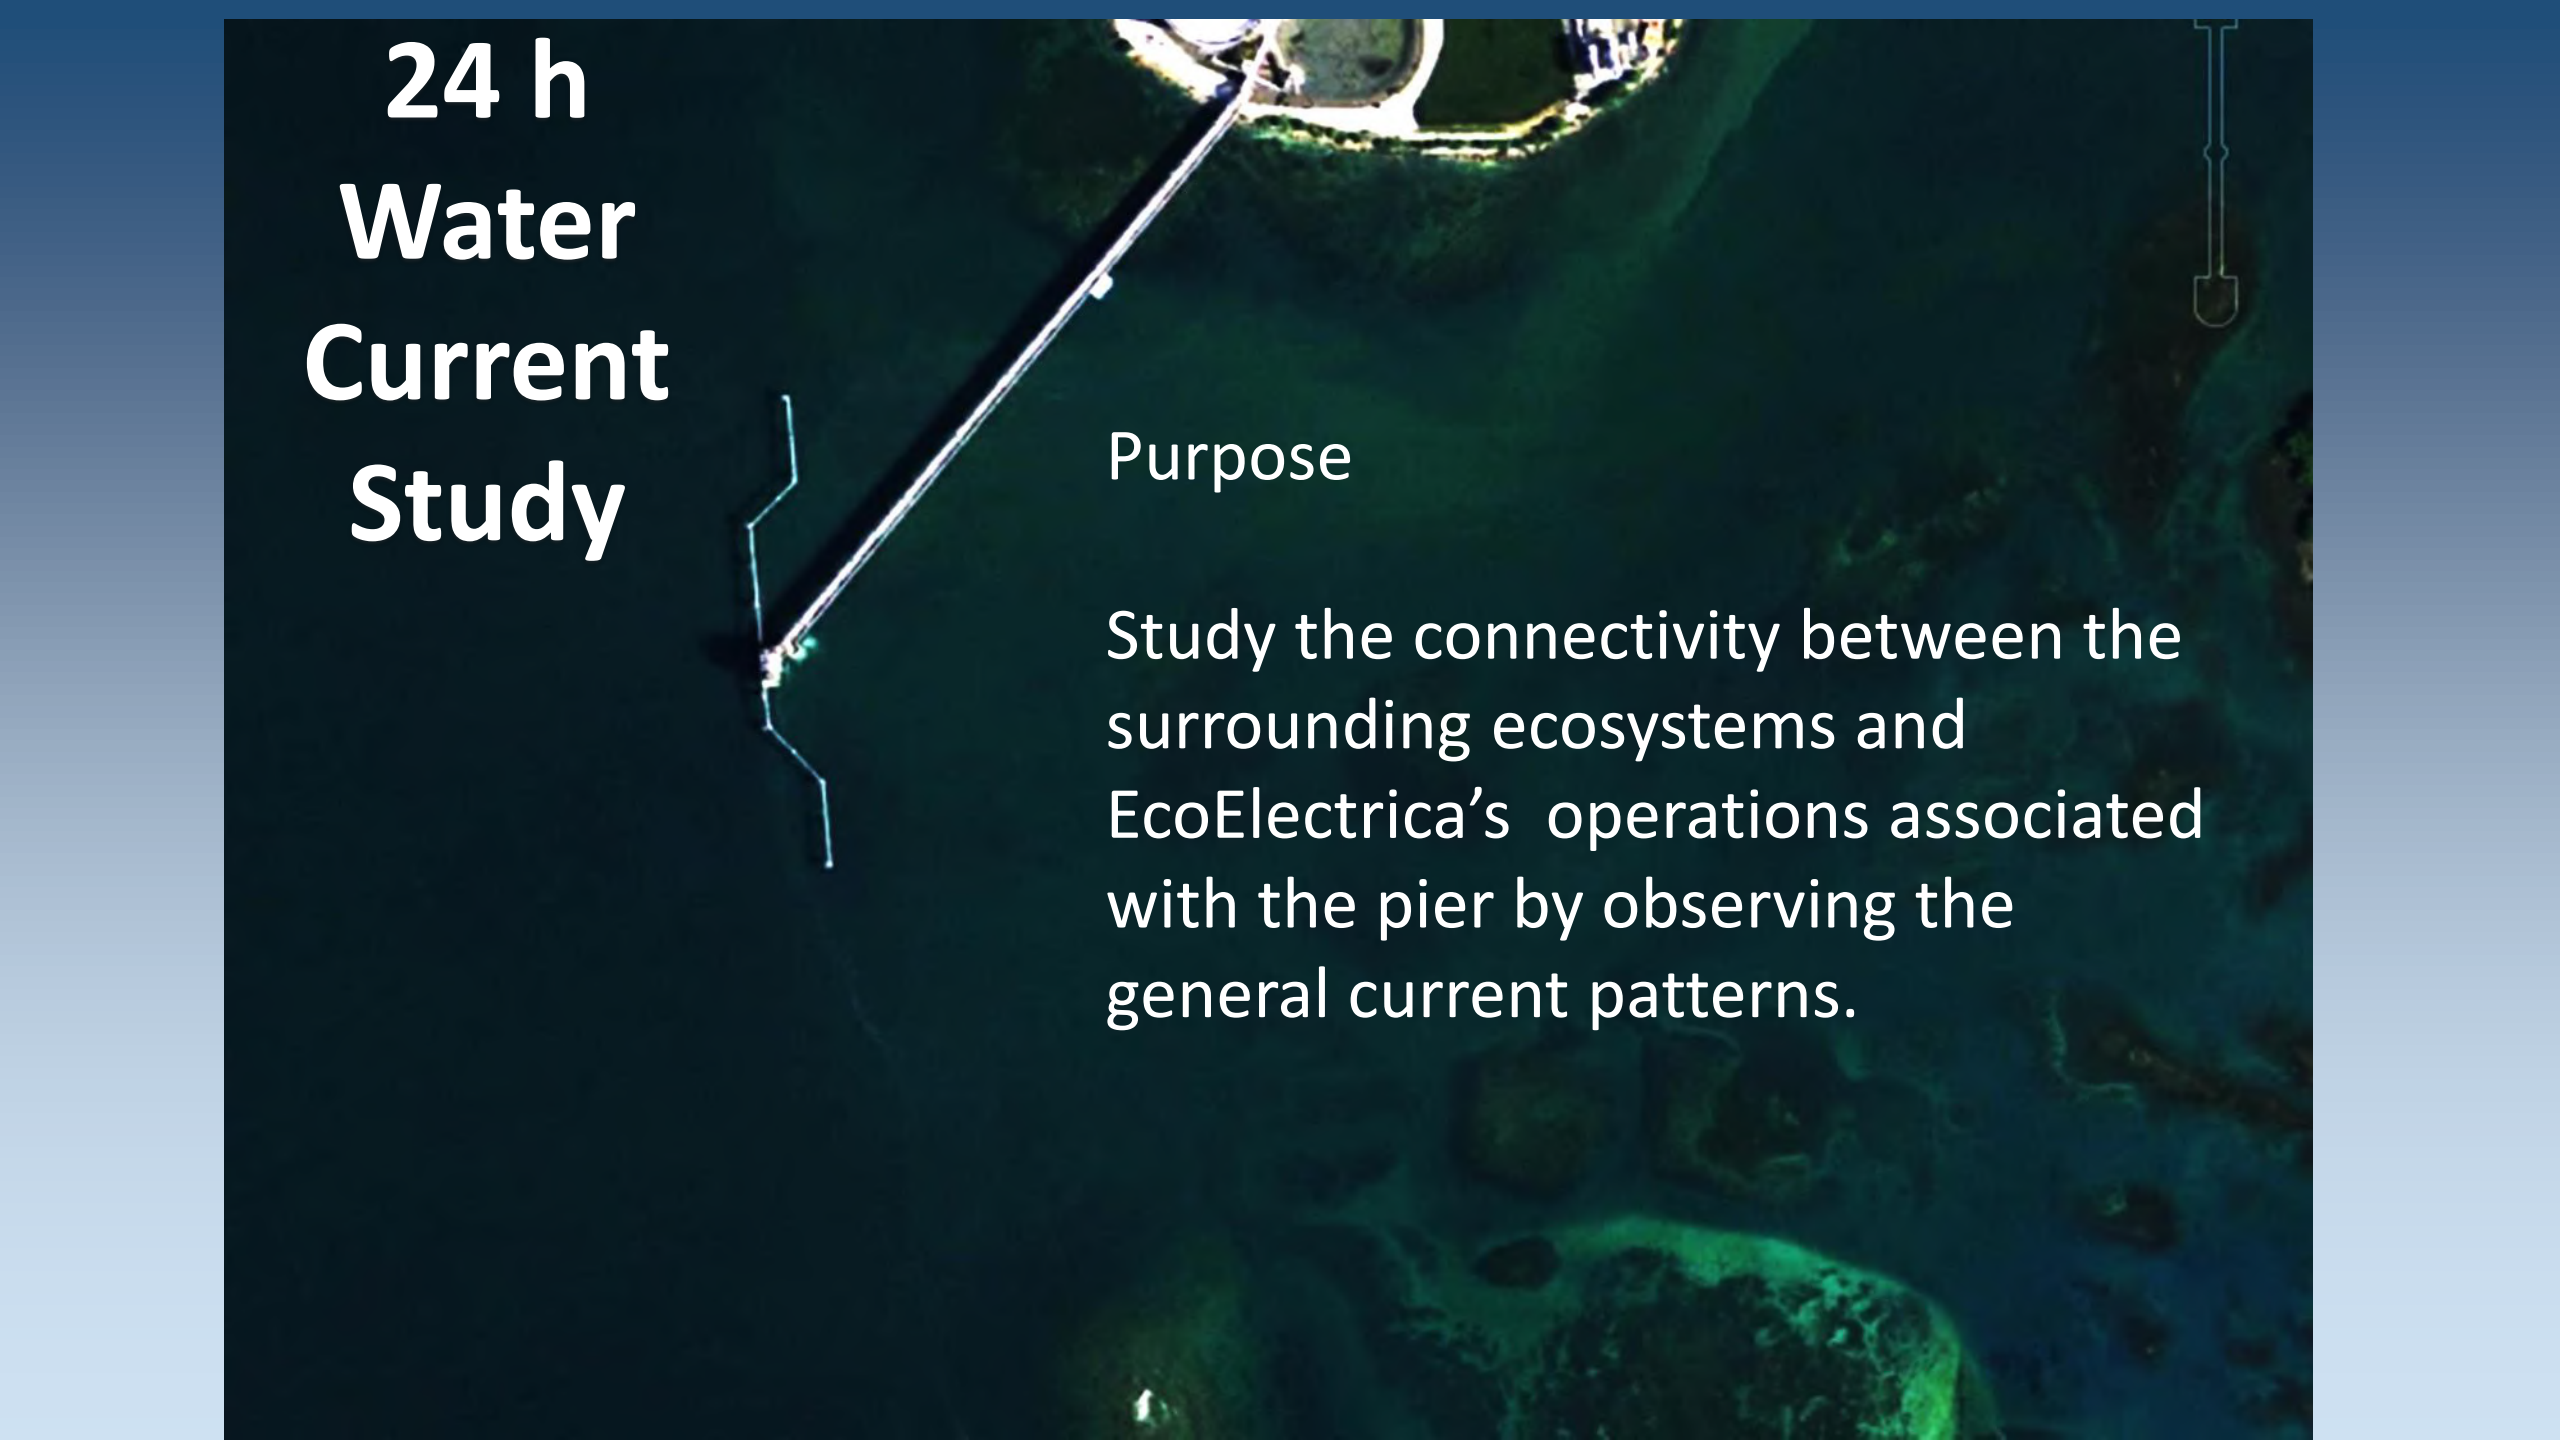

- Did not show a distinct signature of the water closer to the outfall relative to water farther away.

WATER CURRENTS

EcoEléctrica
"Un mejor ambiente con gas natural"

An aerial photograph of a pier extending from a shoreline into a body of water. The pier is a long, straight structure with a small boat moored at its end. The water is a deep blue-green color, and the shoreline is visible in the upper left corner. The text '24 h Water Current Study' is overlaid on the left side of the image.

24 h Water Current Study

Purpose

Study the connectivity between the surrounding ecosystems and EcoElectrica's operations associated with the pier by observing the general current patterns.

24 h Water Current Study

General Methods

- Two GPS containing drifters were released from the area indicated.
- Drifters were recovered and released again 13-14 times over a period of 24h.
- The video shows the results of those trajectories for Drifter 1.
- Drifter 2 followed similar trajectories .

Average Trajectories Summary

Water Currents				
Bearing	NE	SE	WSW	WNW
% sampling time	10.1	2.1	57.2	30.6

IMPINGEMENT

A photograph of a nuclear power plant situated on a body of water. The plant features a large, silver, cylindrical containment dome and several tall, white cooling towers. A long pier extends from the foreground into the water. The background shows a range of blue mountains under a clear sky. A large, light blue, curved graphic element arches over the bottom half of the image.

EcoEléctrica
"Un mejor ambiente con gas natural"

Impingement Survey Summary

- Monthly photographic surveys were conducted since 2015 to 2017.
- 34 surveys (24-hrs) conducted:
 - 23040 photos
 - 6451 fish counts
 - 28 fish species
- No fish impingements were observed.
- 7 *Aurelia aurita* impinged.

ENTRAINMENT

A photograph of a nuclear power plant situated on a body of water. The plant features a large, silver, cylindrical containment dome and several smaller buildings and structures. In the foreground, a long pier or walkway extends from the left side into the water. The background shows a range of blue mountains under a clear sky. A large, light blue, curved graphic element arches over the bottom half of the image, framing the plant and the logo.

EcoEléctrica
"Un mejor ambiente con gas natural"

Entrainment

- Only 0.05% of ichthyoplankton was estimated to be entrained in the CWIS system.
- The proportions were even lower for planulae (0.02%) and fish eggs (0.05%).

CONSERVATION PROJECTS

EcoEléctrica
"Un mejor ambiente con gas natural"

Restoration

- 2016-12 colonies were outplanted from Guanica Nursery
- 91% survivorship
- 2019 – Established nursery at Maria Langa with Puerto Rico Department of Environmental and Natural Resources growing 156 colonies
- Expected to produce around 1,400 colonies in 3 years (using cuttings)

Bioluminescent Bay, La Parguera, Lajas

The aims of the projects develop at the Bioluminescent Bay are to obtain and corroborate knowledge about the bioluminescent phenomenon.

Mangrove

4 Wet Tables establish as nursery for 3 species of mangrove

Red Mangrove (*Rhizophora mangle*)

Black Mangrove (*Avicennia germinans*)

White Mangrove (*Laguncularia racemose*)

WHAT'S NEXT

A photograph of a nuclear power plant situated on a waterfront. The plant features a large, silver, cylindrical containment dome and several tall, white cooling towers. A long pier extends from the foreground into the blue water. In the background, there are rolling hills under a clear blue sky. A large, light blue, curved graphic element arches over the bottom half of the image.
